                                                                                                                                                                                                                                                                                             The present sequence encodes human activation-induced cytidine deaminase CC (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antianaemic, antiasthmatic, ophthalmological, anti-HIV and cermatological activities, and can be used in gene therapy. AID CC disease are useful in methods for identifying drugs for the CC treatment of B cell associated immune system disorders, immunodeficiency CC disease and allergies, such as immunoglabulin A (1gA) deficiency CC disease, IgA nephritis, gamma-globulinemia, atopic dermatitis, Rosen CC disease, IgA nephritis, gamma-globulinemia, atopic dermatitis, Rosen CC disease, IgA of allergy, drug allergy, allergic rhinitis, Rosen CC disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, ataxia telangiectasia, common variable common deficiency disease, ataxia telangiectasia, common variable commondeficiency disease, ataxia telangiectasia, common variable commondeficiency disease, ataxia telangiectasia, common variable common deficiency disease, ataxia telangiectasia, common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable common variable comm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IGA nephritis, gamma-globulinamia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, DiGeorge disease, ataxia telanglectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IGE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for genes therapy and these disorders. The present sequence represents the exon 3 genomic DNA sequence of human AID.

AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAC55314 standard; DNA;

                                                                                                                                                                     The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency diseases, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, orug allergy, allergic rhinitis, Rosen immunodeficiency disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, ataxia telangiectasia, common variable immunodeficiency disease, ataxia telangiectasia, common variable immunodeficiency disease, ataxia telangiectasia, common variable
                                                                                                      II deficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The

                                                                                                                                                                                                                                                                                                                                                                                                             antianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. All polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency diseases are useful gramma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, Dideorge disease, ataxia telanglectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences are consistent as the context of the DNA sequences are consistent as the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immune related disease; allergy; allergic disease; antiallergic; antianaemic; antiastimatic; ophthalmological; anti-HTV; dermatological; gene therapy; B cell associated immune system disorder; food allergy; immunodeficiency disease; immunoglobulin A deficiency disease; asthma; IgA nephritis; gamma-globulinaemia; atopic dermatitis; allergic colitis; drug allergy; allergic rhinitis; Rosen disease; Digeorge disease; AIDS; ataxia telangicctasia; common variable immunodeficiency disorder; major histocompatibility class II deficiency disease; auto immunodeficiency syndrome; IgG subclass selection disorder; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (NISB )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                05-FEB-2001
                                                                                                                                                                                                                                                                                         encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents a genomic DNA sequence of human AID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid encoding activation induced cytidine deaminase, useful a target for drug development for immune-related diseases including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Honjo T,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      05-OCT-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antianaemic, antiasthmatic, ophthalmological, anti-HUV and dermatological activities, and can be used in gene therapy. All polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency colities, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, Rosen colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, Digeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, ALDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID grotein may be used for diagnosis and treatment of these disorders. The protein may be used for diagnosis and treatment of these disorders. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                              antianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, altergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 3; Page 126-130;

CC (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and CC has cytidine activity similar to APOBEC-1. AID has antiallergic, CC antianaemic, antiathmatic, ophthalmological, anti-HIV and CC dermatological activities, and can be used in gene therapy. AID CC polynucleotides are useful in methods for identifying drugs for the CC treatment of B cell associated immune system disorders, immunodeficiency CC diseases and allergies, such as immunoglobulin A (IgA) deficiency CC disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic CC colitis, asthma, food allergy, drug allergy, allergic rininitis, Rosen CC disease, Digeorge disease, ataxia telangiectasia, common variable CC immunodeficiency disease, ataxia telangiectasia, common variable CC II deficiency disease, AIDS (auto immunodeficiency syndrome), elevated CC II deficiency disease, AIDS (auto immunodeficiency syndrome), elevated CC croding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The CC present sequence represents the exon 4 genomic DNA sequence of human AID

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) croteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For ceample, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement of acids into a host cell and culturing the cell to express the completion. (I) proteins and polynucleotides may be used to prevent, concers and treat immune/haematopoietic-related diseases, especially concers and cancer metastases of haematopoietic derived cells. AAK64703 concers and cancer metastases of haematopoietic antigen genomic concers and treat human immune/haematopoietic antigen genomic concers and cancer metastases of haematopoietic antigen genomic concers and cancer metastases of
                                                                                                                                                                                                                                                                                                                                                                                                                                   US-09-966-880A-8

                                                                                            Percent Similarity:
                                                                                                                                                                                                                                                                                             The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has anitallergic, antianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID compoundation of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, Rosen colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen immunodeficiency disease, DiGeorge disease, ataxia telangiectasia, common variable indmunodeficiency disease, AIDS (auto immunodeficiency yardorome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents a specifically claimed PCR primer for human control of the AID which is also used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-MAR-1999;

Pred. No.:
                                                                                                                                                                      The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (1gA) deficiency disease, IgA nephritis, gamma-globulinaemia, allergic rhinitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, DiGeorge disease, AIDS (auto immunodeficiency syndrome), elevated immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The Drasent sequence represents a specifically claimed DCR primer for human CAID, which is also used in a example from the approach.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-MAR-1999;

B
                            CC has cytidine activity similar to APOBEC-1. AID has antiallergic,
CC antianaemic, antiasthmatic, ophthalmological, anti-HIV and
CC dermatological activities, and can be used in gene therapy. AID
CC dermatological activities, and can be used in gene therapy. AID
CC polynucleotides are useful in methods for identifying drugs for the
CC treatment of B cell associated immune system disorders, immunodeficiency
CC diseases and allergies, such as immunoglobulin A (19A) deficiency
CC diseases, IgA nephritis, gamma-globulinaemia, atopic dermatitis, Rosen
CC colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen
CC disease, DiGeorge disease, ataxia telangiectasia, common variable
CC immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated
CC IgE disorder, and IgG subclass selection disorder. The DNA sequences
CC encoding AID may be used for gene therapy and the antibodies to the AID
CR protein may be used for diagnosis and treatment of these disorders. The
CC protein may be used for diagnosis and treatment of these for human
CC AID, which is also used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-09-966-880A-8 (1-198) x AAC55328
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-MAR-1999;

The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, aduq allergy, allergic dermatitis, Rosen disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, ataxia telangiectasia, common variable

                                                                                                                                                                                                                                          WPI; 200
P-PSDB;
                    The sequence data for this patent did not form specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.
                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1875) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   II deficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene the AID another the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents a specifically claimed PCR primer for human AID, which is also used in an example from the present invention.
                                                         (ABB57737-ABB72072)
                                                                                                                                                                    Claim 1;
                                                                                                                                                                                           New isolated nucleic genes from Drosophila interactions -
                                                                                                                                                                                                                                                                                                                             23-MAR-2000;

                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL018176-ABL30511), expressed DNA sequences (ABL018176-ABL30511), and the encoded proteins (ABB0737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drosophila melanogaster expressed polynucleotide SEQ ID NO 19880
                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic a genes from Drosophila interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2001-656860/75.

US-09-966-880A-7
Sequence 7, Application US/09966880A
Sequence 7, Application US/09966880A
Patent No. US20020164743A1
GENERAL INFORMATION:
APPLICANT: Honjo, Tasuku
APPLICANT: MUTAMATSU, MASAMICHI
TITLE OF INVENTION: NOVEL CYTIDINE DEAMINASE
FILE REFERENCE: 05501-088001
CURRENT APPLICATION NUMBER: US/09/966,880A
CURRENT FILING DATE: 2001-09-28
PRIOR APPLICATION NUMBER: PCT/PP0/01918
PRIOR FILING DATE: 1999-03-29
PRIOR FILING DATE: 1999-05-24
PRIOR FILING DATE: 1999-05-24
PRIOR FILING DATE: 1999-03-29
NUMBER: OF SEQ ID NOS: 36
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 7
LENGTH: 2818
TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
NAME/KEE: CDS
LOCATION: (80)...(673)
